

MAIZE LOADERS

FEATURES

- Heavy duty construction
- Output in excess of 200tph (dependant on logistics)
- Hydraulically foldable unit for quick and easy transport
- Wide intake hopper with scraper chain
- Levelling door to control height of product
- Wide heavy duty loading elevator
- Hydraulic controls throughout, including raise & lower of axle
- LED lighting system

Leave soil at the field. Cut down on transport costs.

Niagri Maize loaders are designed to transfer crops from field trailers to bulkers at the field side. Loading at the field saves on unnecessary logistics, and prevents mud and debris on the road.

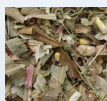

The machine is built for business, with a heavy duty construction and an output of 200tph. Hydraulically foldable unit for quick and easy movement. With a wide hopper intake and scraper chain, to prevent build up. The levelling door controls the height of the product to maintain a constant flow through the machine. With various hydraulic controls, the machine can be levelled, the axle can be raised and lowered to aid loading, but can also be raised for transport.

A hydraulic end section, combined with a discharge sock, minimises spillages. The machine folds up in minutes ready for transport and features a LED lighting system.

Machines manufactured to order.

Specifications to suit customer requirements.

This machine is suitable for the following crops:

Maize
